What is Agile Architecture Practitioner

Agile Architectuur Practitioner is designed for architects who need to adapt to the agile way of working. In today's fast-paced development environments, it's crucial to understand your role within a team and how to effectively contribute. This training provides practical tools to help you apply agile architecture principles in real-world scenarios, ensuring you continuously add value as an agile architect.

Who should attend Agile Architecture Practitioner

- Enterprise Architects: Professionals responsible for aligning IT strategy with business goals, ensuring the architecture supports agile methodologies.
- Solution Architects: Individuals who design and manage solutions within agile frameworks, focusing on delivering value incrementally.
- Technical Leads: Leaders who oversee development teams, ensuring architectural integrity while adapting to agile practices.
- Scrum Masters: Facilitators who support agile teams, ensuring architectural considerations are integrated into the development process.
- Product Owners: Stakeholders who prioritize and manage product backlogs, ensuring architectural enablers are addressed.
- IT Managers: Managers who oversee IT operations, ensuring teams adopt agile architecture practices for better efficiency.
- Software Developers: Developers who need to understand architectural principles to contribute effectively in agile teams.
- Business Analysts: Analysts who bridge the gap between business needs and technical solutions, ensuring agile architecture aligns with business goals.
- Project Managers: Managers who oversee projects, ensuring agile principles are applied to architectural decisions.
- Quality Assurance Engineers: Engineers who ensure the quality of software products, integrating agile

architecture practices into testing processes.

Prerequisites

Participants should have a basic understanding of agile methodologies and some experience in architecture or software development.

Objectives

At the end of the training you will be able to:

- Guide and support scrum teams from an architecture perspective.
- Act as an agile system/solution architect.
- Define value-adding enablers as an agile architect (i.e., non-functional product owner).
